

The NEW zipLogix Digital Ink®

zipLogix Digital Ink® is the digital signature solution designed for the real estate professional. The latest upgrade to the platform allows members to assign signature tasks easier than ever before.

How to add Signature/Initial tags:

There are multiple locations inside zipForm® Plus to launch a digital Signature Packet. Click on any of the above buttons inside zipForm® Plus to begin. Users must then choose what forms the recipient will sign and who the actual recipients or signers are. When zipLogix Digital Ink® launches, follow the steps below:

1. Use the dropdown lists to toggle which signer(s)/form(s) will be edited
2. Add Signature/Task toolbar: Drag and drop tasks (signatures, initials, etc) from here, onto the form itself
3. Resize or otherwise edit the task fields with the controls on the right side of each task field
4. Send the email request for signatures, save your work, or quit the draft

The screenshot shows the zipForm Plus interface for a 'Counter Offer' document. The top navigation bar includes 'BACK', 'SELECT FORMS', 'SELECT PARTIES', 'ADD SIGNATURES', and 'SEND'. The user 'Danny Rand' is selected. The document title is 'Counter Offer'. The form content includes legal text and signature fields. Four red arrows indicate key steps: 1. Selecting the user, 2. Dragging a signature tag from the toolbar, 3. Editing the signature field, and 4. Saving or quitting the draft.
